**Procedure:** Add in each ingredient separately and mix in thoroughly after each.

**Directions for use:** Transfer a small amount of the powder to a separate container. While slowly adding water dropwise, stir to form a paste of an easily spreadable consistency. Apply an even layer of the mask to the face and allow it to dry for ten minutes. These two steps are very important factors for the best results with this formula 1.) application of the paste in a uniform film thickness with good coverage and 2.) control of the drying time. Also, it is important to note that the film will not be completely dry at the 10-minute mark. Once dried for ten minutes, immediately lift the film from the edge and peel away from the face. Wash off any residual dried mask with a soft cloth and warm water. Dispose of any unused paste.
